**D**oes a perfect golf score necessarily have to go hand in hand with a "perfect complexion"? With the latest brightening serums and creams, together with the best suncreams, we promise that you'll be at the top of the game without having to sacrifice anything.

**SUN'S OUT**

Everyone knows that the sun's UV rays can cause skin tone to darken as well as age the skin prematurely if you expose too much of it without protection. So it's only natural that the first step in achieving a fair and even-toned complexion is with the daily use of sunscreen.

Due to constant exposure to UV radiation and pollution without protection, our skin ends up producing an excess amount of melanin because it believes itself to be under attack. Over time, this constant excess production of melanin can lead to an uneven skin complexion.

To prevent this, daily use of suncreams is necessary to ensure that skin is protected against harmful free radical damage and UV radiation.
